

# TestFairy

## Enterprise Mobile Testing Platform

TestFairy is an enterprise-grade mobile testing platform that helps companies streamline their development process and automate app distribution, bug reporting and crash reporting in a secure environment.

TestFairy provides teams with the ability to easily create perfect bug reports, with videos showing what happened prior a crash or before something went wrong.

These issues can then be posted automatically to JIRA, Trello, VSTS, Slack or any other system.

By allowing users to easily post their feedback to the right platform, TestFairy saves administrative costs, reduces error rates and makes the development workflow extremely efficient.

### APP DISTRIBUTION

TestFairy offers enterprise-grade app distribution capabilities, allowing companies to easily and securely distribute the right apps to the right users. Enforce corporate security policies, automatically update apps to new versions and easily revoke access to installed apps.

### VIDEO RECORDING

TestFairy provides mobile teams with videos showing exactly what happened on a mobile device during testing, before a crash, or before something went wrong. See your users' sessions, fix bugs faster than ever and significantly improve your app quality.

### IN APP FEEDBACK

TestFairy helps users provide feedback by simply shaking their device or taking a screenshot. These report can automatically get posted to JIRA, Slack or Trello along with the session video recording, logs, metrics and crash reports.

### SECURITY

TestFairy is available as a private cloud or an on-premise installation and can integrate with any SAML Single Sign-on service. TestFairy is the only platform that provides end-to-end data encryption using your private/public keys, so that nobody but you can see your data.
