

Mobile Quality Enterprise Platform

TestFairy is a mobile platform that helps companies streamline their development process and release better apps in shorter development cycles. The platform includes enterprise-grade app distribution, in-app bug reporting, session video recording, crash reporting, remote logging, connectivity to Sauce Labs' Real Device Cloud and integration to all the major bug systems, SSOs, CIs, and Team communication services. All this, in a highly secure, compliant private cloud.

Enterprise App distribution

TestFairy includes an enterprise-grade app distribution platform for iOS and Android that is highly configurable, tightly secured and can sync with your corporate Single Sign-on. With TestFairy only the right people will have access to your apps.

Video sessions

TestFairy provides mobile teams with videos showing how users use your apps on their real devices, in real-time. This helps developers understand user behaviour, see what happened before a crash or a bug report and fix bugs in zero time!

In-app Feedback

TestFairy allows users to report bugs by shaking their device or just clicking on a button and sketching on the screen. By making it easy for testers to report bugs, the amount of reports will increase and so will their quality.

Seamless Integrations

TestFairy can integrate with JIRA, Trello, Slack and any other platform, so that the issues posted by your team will automatically get filed in the right place without any manual work needed.

Security & Compliance

TestFairy is compliant with all major security standards. This means running your service on a private cloud, with data encryption, Single Sign-on integration, Firewall, audit logs and anything your CISO will ask for in order to stay compliant.

Remote Support

TestFairy is perfect for support teams who need to quickly understand their end users and their problems when things don't work as expected. See what users do and easily escalate support tickets to dev teams in one click.

Cloud Architecture

A unique modular system to easily integrate with any tool in the ecosystem
